FEATURES

Metallic container for paper and cardboard collection with a capacity of 3 cu mtr.

Can be adapted to collect glass and plastics using add-on apertures.

Galvanised plate steel body with single piece, cold-drawn corner columns.

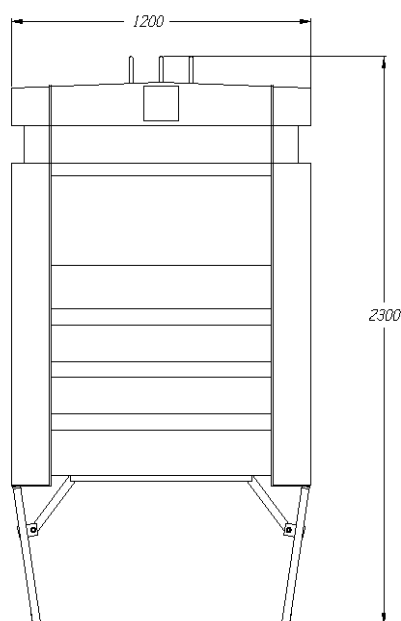

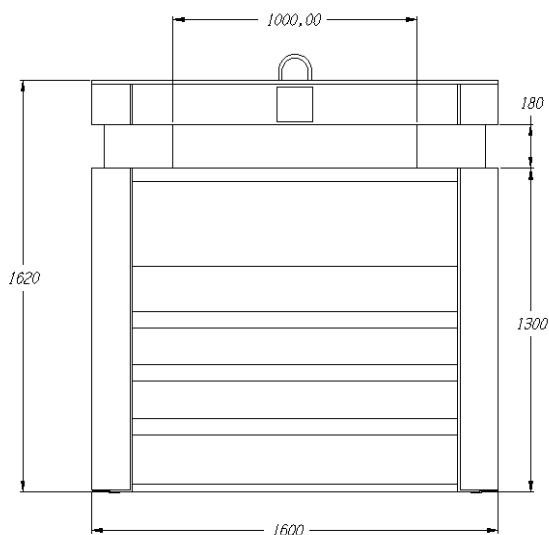

The side panels are welded to the columns, and are folded to provide extra strength.

The aperture is kept closed by means of a pivoting door to prevent water ingress and air ingress in the event of fire.

Unloading system with doors that pivot sideways to allow the container to be emptied completely.

All metal parts, welds, drill holes, etc. are hot-dip galvanised and then cold galvanised to avoid rust points and to keep the product in good condition.
